- Ranked number one 'Most Important New Non-Fiction' *Die Zeit*
- 'Hermann Scheer has taken aim against a number of our planet's Goliaths all at once. The world needs pioneers like him.' Ernst Ulrich von Weizsäcker
- This new book from the internationally renowned author of *The Solar Economy* and *A Solar Manifesto*, and winner of *Time Magazine's* 'Hero of the Green Century', demonstrates why the transition to renewable energy is essential and how it can be done

For 200 years industrial civilization has relied on the combustion of abundant and cheap carbon fuels. But continued reliance has had perilous consequences. On the one hand there is the insecurity of relying on the world's most unstable region – the Middle East – compounded by the imminence of peak oil, growing scarcity and mounting prices. On the other, the potentially cataclysmic consequences of continuing to burn fossil fuels, as the evidence of accelerating climate change shows.

Yet there is a solution: to make the transition to renewable sources of energy and distributed, decentralized energy generation. It is a model that has been proven, technologically, commercially and politically, as Scheer comprehensively demonstrates here. The alternative of a return to nuclear power – again being widely advocated – he shows to be compromised and illusory.

The advantages of renewable energy are so clear and so overwhelming that resistance to them needs diagnosis – which Scheer also provides, showing why and how entrenched interests oppose the transition and what must be done to overcome these obstacles.

**Hermann Scheer** is a member of the German Bundestag (Parliament) and President of EUROSOLAR, the European organization for renewable energies. Dr Scheer has received numerous awards, including the World Solar Prize and the Alternative Nobel Prize.

Paperback ~~£19.99~~ £17.00 ISBN 1-84407-355-6 | December 2006
